

Amendments to the Abstract:

Please replace the Abstract with the following:

A communication terminal comprising a video reproduction device configured to carry out a video reproduction, a communication device configured to carry out a communication; and a reproduction-end-time acquisition device configured to acquire an end time of the video reproduction carried out by said video reproduction device. When an incoming communication arrives from a communication partner terminal in the course of the video reproduction carried out by said video reproduction device, the communication partner terminal is informed of the end time of said video reproduction. The communication partner terminal is external to the communication terminal.
